fmd large PDF perf document

Section 0

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Item | Status | Notes

parser | ready | 10

```
fn hot_path(input: &str) -> usize { input.len() }
```

Section 1

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 2

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 3

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 4

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 5

Typography performance depends on repeated shaping, kerning, ligature formation, table

layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 6

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 7

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Item	Status	Notes
parser	ready	10
layout	building	20

Section 8

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 9

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 10

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 11

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally

repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

```
fn hot_path(input: &str) -> usize { input.len() }
```

Section 12

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 13

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 14

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Item | Status | Notes

parser | ready | 10

layout | building | 20

Section 15

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 16

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 17

Typography performance depends on repeated shaping, kerning, ligature formation, table

layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 18

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 19

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 20

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 21

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Item | Status | Notes

parser | ready | 10

Section 22

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

```
fn hot_path(input: &str) -> usize { input.len() }
```

Section 23

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 24

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 25

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 26

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 27

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 28

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Item | Status | Notes

parser | ready | 10

layout | building | 20

Section 29

Typography performance depends on repeated shaping, kerning, ligature formation, table

layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 30

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 31

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 32

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 33

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

```
fn hot_path(input: &str) -> usize { input.len() }
```

Section 34

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 35

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 332

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 333

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 334

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 335

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 336

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Item	Status	Notes
parser	ready	10
layout	building	20

Section 337

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 338

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 339

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 340

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 341

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

```
fn hot_path(input: &str) -> usize { input.len() }
```

Section 342

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 343

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Item	Status	Notes
parser	ready	10
layout	building	20

Section 344

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 345

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 346

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 347

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 348

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 349

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 350

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Item	Status	Notes
parser	ready	10

Section 351

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 352

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

```
fn hot_path(input: &str) -> usize { input.len() }
```

Section 353

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 354

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 355

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 356

Typography performance depends on repeated shaping, kerning, ligature formation, table layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Section 357

Typography performance depends on repeated shaping, kerning, ligature formation, table

layout, code rendering, and deterministic PDF object serialization. This paragraph intentionally repeats documentation words such as optimization, deterministic, representation, typography, hyphenation, and pagination so the text pipeline has real work to do.

Item | Status | Notes
